

For a complete, deep down clean

ENVIRON HP is our exclusive green Encapsulation Cleaner (Highly Concentrated) that assists in making the ORBOT system complete.

When you combine the ENVIRON HP green cleaner with our exclusive orbital drive technology and accessory pads, you will attain tremendous soil extraction, fast dry times, no reoccurring stains and a healthier environment for homes and commercial settings.

How Environ HP Works with Orbital Drive Technology

The orbital drive of the ORBOT generates hundreds of small oscillations that spin at roughly 1725 revolutions per minute. This orbital drive pattern allows for all sides of the carpet fibers to be agitated and therefore all of the soil will be effectively removed from the carpet fiber.

To ensure that the agitated soil will not stick to the carpet fiber again, a polymer is needed to trap and encapsulate these soil particles. The polymer element in ENVIRON HP will form distinct crystals when it dries. These crystals are the principle vehicles that stop wicking or the reoccurring of stains. They also enable the soil particles to be extracted through post-vacuuming while keeping carpets cleaner for longer periods of time.

Encapsulating polymers combined with an organic soil releaser and enhanced with the cleaning power of hydrogen peroxide.

Cleans up to 1100 m2 with the ORBOT Method.

Makes up to 120 liters.
